**Type specification according to the PROFINET® Guideline**

PROFINET® is an international standard for communication systems that defines the cabling within and between production islands. The PROFINET® system specifies copper-based as well as fibre optic transmission media.

Its foundation, the ‘PROFINET® Cabling and Interconnection Technology Guideline’, defines three cable types for copper-based cables. These types specify the exact structure and the mechanical and electrical properties. PROFINET® compliant cables

can be distinguished by their cable marking that states the PROFINET® compliance as well as their respective cable type according to the aforementioned guideline.
